

PROJECT DETAILS

Location: Ellisville, MO
Products: Ledgestone Columns
Size: Custom 36" x 24"

OVERVIEW:

The owners of this new St. Louis County self-storage facility crafted their design around a horizontal metal siding panel system. In order to get a building permit, the city codes required a masonry system to be incorporated into the design. The building owner researched stone alternatives and found that URESTONE factory-fabricated Column Wraps were a cost-effective solution in both materials and especially labor.

The columns were typically 3 feet wide and 24 feet high but were constructed in 4 foot high sections.
