These synthetic textured architectural panels are the perfect alternative to typical EFIS/Stucco applications.

We have designed the system to compliment stone, brick, and CMU exteriors and is equally suitable for new construction and remodels.

## KEY BENEFITS

- Our system provides a wide range of architectural design and size options.
- Easily add corporate branding to the overall design.
- Installation accomplished in all weather conditions.
- Unlike conventional EFIS (which can easily be damaged), we've created **STUCCO CLAD** from a high-density board.
- Installation is done by carpenters, not EFIS contractors.
- **STUCCO CLAD** arrives textured and painted, ready to install.
- Available in 4' x 8' boards that interlock.
- Standard & custom corners are available.

These are our standard color options. If you are looking for a specific shade or color—please color-match directly to Sherwin-Williams to ensure matching your corporate branding.

# COLOR THEORY

A dramatic design element to consider when using STUCCO CLAD is using color gradients spanning from the panels to the accent colors in the same value or matched to current building material tones. We'd love to offer suggestions or concept ideas to ensure the main panels, secondary panels, entrance panels, and cornice on your project are cohesive and stunning.
